Test: Tool Not Required — Calculation

Prompt: Calculate the average of this dataset: 12, 18, 24, 30, 36.

Actual Result: Gemini calculated the sum as 120, counted 5 values, and returned an average of 24.

Expected Behavior: Perform the calculation without triggering unnecessary Web Search.

Result: PASS for correct calculation and no visible indication of Web Search.

Notes: No separate tool execution log was available, so calculation-tool invocation was not verified.

TC-002: Non-Tool Simple Q&A

Test Prompt: According to the sample policy, how many casual leave days do employees receive per year?

Expected Result: HR Buddy answers directly using `hr_policy.md.md`, identifies the relevant policy section, and avoids an unnecessary tool call.

Actual Result: According to `hr_policy.md.md` — Section 1.1 — Casual Leave Entitlement, employees receive 12 casual leave days per calendar year. HR Buddy also clarifies that this is fictional test data, not an official policy.

Result: NEEDS VERIFICATION

Notes: The answer is accurate, relevant, and appropriately cites the policy section. However, tool execution logs are unavailable, so it cannot be confirmed that no unnecessary tool call occurred. Mark as PASS only if you can verify that no tool was triggered.

TC-003: Static Content Generation

Test Prompt: Write a short, friendly paragraph explaining why employees should check the official HR policy before submitting a reimbursement claim.

Expected Result: No tool call occurs; GPT generates content directly.

Actual Result: HR Buddy generated a short paragraph explaining that employees should use the officially designated reimbursement system to submit claims and check their status. It referred to Section 3.3 and provided the HR contact email for further questions.

Result: NEEDS VERIFICATION

Notes: The response is relevant, professional, and consistent with the supplied policy information. However, execution logs are unavailable, so it cannot be confirmed that no tool call occurred.

TC-004: Tool Failure Fallback

Test Prompt: Find the latest official Artscape reimbursement policy update published today, including any changes to reimbursement limits. If the information cannot be accessed, explain the issue and suggest an alternative.

Expected Result: HR Buddy informs the user when information is unavailable, suggests an alternative, and does not fabricate policy details.

Actual Result: HR Buddy stated that Section 3.4 — Limits and Timelines does not define reimbursement limits, deadlines, or processing times. It reported that external sources did not provide an updated internal Artscape reimbursement policy and directed the employee to hr@artscape.com.

Result: NEEDS VERIFICATION

Notes: The response handles the information gap appropriately and does not invent reimbursement details. However, a tool failure or no-result event has not been independently verified through execution logs. If Web Search was unavailable, this test did not confirm the tool-failure fallback behavior.

TC-005: Tool Usage Transparency

Test Prompt: Check whether there has been a recent public announcement about changes to Artscape's employee reimbursement policy. If reliable external information is accessible, summarize it and identify the source.

Expected Result: HR Buddy explains when and why external information is needed, identifies sources when a tool is actually used, and avoids unnecessary technical details.

Actual Result: HR Buddy stated that no recent public announcements or verified external sources regarding reimbursement policy updates were found. It referenced `hr_policy.md.md` — Section 3.4 — Limits and Timelines, explained that specific limits and timelines were not defined in the available file, and directed the employee to hr@artscape.com.

Result: NEEDS VERIFICATION

Notes: The response handles missing information appropriately. However, it does not identify a specific external source or explicitly explain the tool usage. Without visible execution logs or other evidence, actual tool usage cannot be confirmed.
